Why InternPal?

The purpose of our project is to systemize and smoothen the online infrastructure of internship and placement allocation process. Hence, we have come up with an idea which enables us to combine internship & job postings as well as internship evaluation on a single platform.

Issues in existing Job Allocation Platforms

The existing platforms for internship and job allocation are not college specific. This means that there is no suitable way of internship allocation and its further evaluation on a single platform. Also we felt the need to make a website which can be customized as per the needs of the college which is clearly not possible on a generic platform. The current platforms do not have a job filtering option based on student's requirements.

How does InternPal resolve these issues?

InternPal exclusively focuses on increasing the customizability of an internship/placement allocation platform suited for the needs of the college. This means that any change in internship/placement policy can be implemented accordingly. We also get the opportunity to accommodate internship evaluation post internship which is a necessary requirement. We also provide the job filtering option which can be used for accessing jobs/internships based on what the student needs.

Working and Brief Description of Process

The process begins with students creating their account and filling all the necessary details required for the job process. They have to upload their resumes and college DMC's/proofs for the same. Admin has the privilege to post job openings and details which can be viewed and filtered by the students based on their requirements. The students can apply for the jobs they seek and receive notifications for their rounds and results. The student dashboard will help them to keep a track of the jobs they have applied for. All this is supported by our interactive interface which makes it easy to navigate through these functionalities.

Internship Evaluation

Our website also provides the platform for internship evaluation. The process begins with admin creating mentor accounts and allotting college mentors to the students. Students can submit their presentations and reports via the submission portal for mid-intern and final evaluations. The mentor and panel can view and grade the submissions. Hence, our platform brings ease to the evaluation process on a single platform.

Technology and Stack Used

Frontend: HTML 5, CSS 3, Javascript ES6, React JS and Redux

Backend: Node JS, Express

Database: MongoDB
